PUBLISHED FOR BOSTON COLLEGE

1902

A. M. D. G.

Boston College.

This institution, controlled and directed by the Fathers of the Society of Jesus, was chartered May 25, 1863, by the state of Massachusetts, under the corporate title of "THE TRUSTEES OF THE BOSTON COLLEGE IN BOSTON," with power and authority "to confer such degrees as are usually conferred by colleges in this Commonwealth, except medical degrees."

Under the act of incorporation, schools were opened September 5, 1864.

The same act of incorporation provides "that no student of said College shall be refused admission to, or denied any of the privileges, honors, or degrees of said College on account of the religious opinions he may entertain." Students who are not Catholics will not be required to participate in any distinctively Catholic exercise, nor will any undue influence be exerted to induce a change of religious belief, but evidence will be demanded of the candidate to prove good moral character.

The College is not yet prepared to furnish board and lodging for students. Those, however, whose homes are at a distance from Boston, and who desire to live in the city during the scholastic year, are admitted on special approval of the Faculty and may find suitable accommodations near the College.

System of Education.

The educational system of BOSTON COLLEGE is substantially that of all other colleges of the Society of Jesus. Since the publication of the *Monumenta Pedagogica Germaniæ* by the German government, and the Great Educators' Series by Scribner's Sons, those who are desirous of making either a scientific or historical study of that system have abundant sources of information. To these publications are referred readers interested in studying the detailed working of the system and the practical method of applying its principles as elaborated in the *Ratio Studiorum*.

The subjoined brief outline of the underlying principles of the system, the dominant features of its method, and the object aimed at by its teaching will give a general idea of its purpose.

Education is understood by the Fathers of the Society in its completest sense, as the full and harmonious development of all those faculties that are distinctive of man. It is not, therefore, mere instruction or the communication of knowledge. In fact, the acquisition of knowledge, though it necessarily accompanies any right system of education, is a secondary result of education. Learning is an instrument of education, not its end. The end is culture, and mental and moral development.

Understanding, then, clearly the purposes of education, such instruments of education, that is, such studies, sciences or languages, are chosen as will most effectively further that end. These studies are chosen, moreover, only in preparation, and in such numbers as are sufficient and required. A student who is to be educated will not be forced, in the short period of his college course and with his immature faculties, to study a multiplicity of the languages and sciences into which the vast world of modern knowledge has been

scientifically divided. If two or more sciences, for instance, give similar training to some mental faculty, that one is chosen which combines the most effective training with the largest and most fundamental knowledge.

The purpose of the mental training given is not proximately to fit the student for some special employment or profession, but to give him such a general, vigorous and rounded development as will enable him to cope successfully even with the unforeseen emergencies of life. While giving the mind stay, it tends to remove the insularity of thought and want of mental elasticity, which is one of the most hopeless and disheartening results of specialism in students who have not brought to their studies the uniform mental training given by a systematic college course. The studies, therefore, are so graded and classified as to be adapted to the mental growth of the student and the scientific unfolding of knowledge; they are so chosen and communicated that the student shall gradually and harmoniously reach, as nearly as may be, that measure of culture of which he is capable.

It is fundamental in the system of the Society of Jesus that different studies have distinct and peculiar educational values. Mathematics, the Natural Sciences, Language and History are complementary instruments of education to which the doctrine of equivalence cannot be applied. The specific training given by one cannot be supplied by another.

Furthermore, Language and History have always been held in esteem as leading factors in education. Mathematics and the Natural Sciences bring the student into contact with the material aspects of nature, and exercise the inductive and deductive powers of reason. Language and History effect a higher union; they are manifestations of spirit to spirit, and by their study and for their acquirement the whole mind of man is brought into widest and subtlest play. The acquisition of Language especially calls for delicacy of judgment and fineness of perception, and for a constant,

keen, and quick use of the reasoning powers. A special importance is attached to the classic tongues of Rome and Greece. As these are languages with a structure and idiom remote from the language of the student, the study of them lays bare before him the laws of thought and logic, and requires attention, reflection and analysis of the fundamental relations between thought and grammar. In studying them the student is led to the fundamental recesses of language. They exercise him in exactness of conception in grasping the foreign thought, and in delicacy of expression in clothing that thought in the dissimilar garb of the mother-tongue. While recognizing, then, in education the necessity and importance of Mathematics and the Natural Sciences, which unfold the interdependence and laws of the world of time and space, the Jesuit system of education has unwaveringly kept Language in a positon of honor as an instrument of culture.

Lastly, the system does not share the illusion of those who seem to imagine that education, understood as an enriching and stimulating of the intellectual faculties, has a morally elevating influence in human life. While conceding the effects of education in energizing and refining imagination, taste, understanding and powers of observation, it has always held that knowledge and intellectual development of themselves have no moral efficacy. Religion only can purify the heart, and guide and strengthen the will.

The Jesuit system of education, then, aims at developing, side by side, the moral and intellectual faculties of the student, and sending forth to the world men of sound judgment, of acute and rounded intellect, of upright and manly conscience. And since men are not made better citizens by the mere accumulation of knowledge, without a guiding and controlling force, the principal faculties to be developed are the moral faculties. Moreover, morality is to be taught continuously; it must be the underlying base, the vital force supporting and animating the whole organic structure of education. It must be the atmosphere the student

breathes; it must suffuse with its light all that he reads, illumining what is noble and exposing what is base, giving to the true and false their relative light and shade.

In a word, the purpose of Jesuit teaching is to lay a solid substructure in the whole mind and character for any superstructure of science, professional and special, also for the building up of moral life, civil and religious.

Statement.

It is one of the decided advantages of the system followed in this College, that the student may begin his studies in the Preparatory School which is connected with the College, and then pass on, through the college course to graduation, in the same institution. This secures, besides the moral influence thus gained, a uniform and homogeneous course of teaching and of training. The result of such a course of study is a continuous and normal development of the mental faculties along well defined lines, and the possession of a clear and coherent system of principles upon which any special courses may afterwards safely rest.

The College offers at present only one course, that leading to the degree of Bachelor of Arts. The faculty, however, is preparing to establish another course leading to the degree of Bachelor of Science.

At the end of the year devoted to Philosophy, the eighth in the Classical Course, the degree of Bachelor of Arts will be conferred on those students who shall have attained the required yearly averages and passed satisfactory final examinations.

For the further degree of Master of Arts it will be required that the applicant shall have continued his studies in College one year, under direction of the faculty.

The moral and religious part of education is considered to be incomparably the most important. Catholic students are required to recite daily the catechetical lesson, to attend the weekly lecture on the doctrines of the Church, to make an annual retreat, to present themselves to their confessor every month.

There are various Societies in which, under the moderatorship of College officers, the work of the class-room is supplemented, or special fields in the liberal arts are cultivated.

A choice collection of books, numbering about four thousand, affords the student ample means, both for preparation of lessons and themes, and for reading in connection with his studies.

For his physical development, provision has been made in the well-equipped gymnasium. Here he can enjoy the advantages, not only of a complete apparatus, track, baths, etc., but also of a competent and responsible instructor, who will direct and control his exercises. A small fee covering the expenses will be charged.

A report of each student's class standing is sent to parents or guardians at the end of each term. This report is, after inspection, to be signed by the parents or guardians and returned to the Prefect of Studies.

On the scale used, 100 is the highest mark and 0 the lowest. The student's rank is determined by his position in one of five grades: A, very good, 100-90; B, good, 90-80; C, fairly good, 80-70; D, 70-60; E, below 60, deficient.

At the end of each month, the average of all marks in the separate departments is announced. The average of these monthly averages is what is termed the average of monthly results. To obtain the term average, that of the monthly results and of the examinations are combined in a ratio of two to one.

In the second term or session the same method is followed, and the year's results are seen in the average obtained from the combination of those of the two terms. According to this average of results for the year, class honors and promotions are determined. The medal and premium are conferred on the first two students who have reached the highest annual average above 93; "honorable mention," on those above 85. An average of 60 is required for promotion. To prevent exclusive devotion to one pursuit it has been found necessary for culpable failure in Mathematics, Modern Languages or Natural Sciences to refuse promotion in the main class. Hence students whose grand average for the year is above 60, but whose mark is below 60 in any study at either of the semi-

annual examinations, will be "conditioned" in such studies, and will not be promoted until the condition is removed by a satisfactory examination.

All students must be in their respective class-rooms at 9 o'clock; those who come later must apply for an admission ticket to the Prefect of Discipline.

Any conduct unbecoming the character of a gentleman will be regarded as a violation of the College rules.

Religious motives being habitually appealed to, little need has been experienced of frequent or severe punishment.

Flagrant offences, such as are detrimental to the reputation of the College, or are obstructive of the good of other students, are grounds for suspension or for conditional or absolute expulsion.

The usual hours for school are from 9 A. M. to 2.30 P. M., with short recesses at convenient intervals. Students of Natural Sciences are expected to spend forty-five hours in laboratory work each term, outside the usual school hours.

Terms and Holidays.

The first term begins on the second Tuesday of September; the second, the first Tuesday of February; but students are not precluded from entering at other times. Schools will close by Graduation Exercises on Wednesday, June 24, of the coming year.

Scholarships.

The regularly founded Scholarships are :—

Twenty Scholarships at the disposal of ST. MARY'S CHURCH at the North End. The Scholarships were given by the College in 1864, in recognition of generous contributions made by the parishioners of St. Mary's to the building of the College Church of the Immaculate Conception. The pastor of St. Mary's selects the candidates from among the pupils of the parish school, in which the Scholarships are won by competition.

Two Scholarships founded by REV. WILLIAM ORR, of Cambridge. The Reverend founder has the privilege of selecting the candidates for these Scholarships in conjunction with the President of the College.

The ROSE FITZPATRICK SCHOLARSHIP, founded in 1894, by a bequest of the lady whose name it bears.

The FATHER CHARLIER SCHOLARSHIP, founded in 1894, by the Immaculate Conception Conference of the St. Vincent de Paul Society, to commemorate the semi-centenary in Religion of their Spiritual Director.

The HENRY DOHERTY SCHOLARSHIP, founded in 1895, by the late Henry Doherty.

The FLATLEY SCHOLARSHIP, founded in 1896, by the late Rev. Michael F. Flatley, of Malden, in favor of some deserving student of the parochial school of the Church of the Immaculate Conception, Malden.

The DOLAN SCHOLARSHIPS, one founded in 1896, the other in 1898, by Rev. Michael Dolan, of Newton. The beneficiary is to be a graduate of the Grammar or High School of the Parish of Our Lady at Newton. In case no such student applies, another may be

sent by the pastor of said church or the Archbishop of Boston, provided he is fit to begin the course at the College or Preparatory School.

The JOHN F. CRONAN SCHOLARSHIP, founded August, 1897, by John F. Cronan, Esq., of Boston. This foundation is in favor of any deserving young man who is without means of securing an education. This Scholarship shall be open to competition. All examinations for the same shall be held after due notice is given in at least two newspapers. The holder of this Scholarship is entitled to the privileges of the four years' course in Boston College. In the event of no one applying to compete for the Scholarship, there is reserved the right of selection by His Grace the Archbishop of Boston.

The HANNAH MCCARTHY SCHOLARSHIP, founded in 1898, by a bequest of the lady whose name it bears.

The JAMES E. HAYES SCHOLARSHIP, founded in June, 1900, by the State Council, Knights of Columbus.

Three Scholarships, known as The Loyola Scholarships, founded by a Friend.

A Scholarship for eight years, founded by Joseph Lynch Early, A. B.

Besides these Scholarships, the generous efforts of friends of the College have enabled the faculty to establish twenty-three more, which may be called the Boston College Scholarships. These will be offered for competition whenever they are vacant. Due notice of the dates and conditions of competition will be given in the yearly catalogue of the College.

The sum of $1,500 will furnish a Scholarship which will ensure the tuition of a student, but it will require the interest of $2,000 to enable the student, besides, to purchase his text-books and to meet other contingent expenses of the course.

Societies of the Students.

The Sodality of the Immaculate Conception,

Under the patronage of St. Stanislaus Kostka, was organized in the year 1868-1869, and intended to incite the students to greater piety, and especially to devotion to the Blessed Virgin Mary.

Requirements for Admission to Boston College, 1902.

All candidates for admission must present satisfactory testimonials of good, moral character, and of honorable dismissal from the school or college which they last attended.

Candidates for advanced standing must satisfy the conditions for admission to the Freshman class, and must pass an examination in the studies previously pursued by the class which they aim to enter.

There are three methods of admission to the Freshman class:

1. Admission by Graduation in the Boston College Preparatory School.

Those who have satisfactorily completed the course of the Boston College Preparatory School are admitted without examination.

2. Admission by Certificate.

Graduates of certain High Schools, approved by vote of the Faculty, are admitted without examination on presentation of a copy of the detailed programme of studies pursued by them in such schools, and of a certificate from the Head Master stating that they have successfully completed the course and are prepared to enter college.

3. Admission by Examination.

Candidates who are not admitted by the first or second methods are required to pass the entrance examination as defined below. The programme of this examination is based on the course of studies in the Boston College Preparatory School.
